

CD-ROM INSTALLATION ADDENDUM—

PLEASE READ FIRST:

Thank you for purchasing Sierra's latest CD-ROM interactive adventure. For your convenience, this CD-ROM software can be run two ways: from Multimedia Windows[®] (also known as MPC), or from the DOS prompt.

Please see Page 4 of the game manual for instructions on installing and running this under Multimedia Windows. **NOTE: To successfully run this program under MPC, you must have a VGA graphics adapter with a minimum of 512K. This type of card is also known as a "Super VGA" or "SVGA" card. If your VGA adapter has 256K or less, you must run this program from the DOS prompt, not from Windows.**

Should you encounter any difficulties installing or running your new Sierra CD-ROM software, technical assistance is as close as your nearest telephone. Sierra Technical Support can be reached at (209) 683-8989. Please note that game hints are not provided on the Technical Support hotline.
